

## US and Canada Ring Size Guide

Please print this document with page scale set to 100% in your printer. This is only a reference tool, for the most accurate result you must use a physical ring sizing tool, which is best done in our store.

### How to use this guide:

Please measure the above bar to ensure that your print is at right scale. If the measurements are not exactly 2 inches or 50 mm, your will not get accurate ring sizes.

Place one of your rings, that can be worn comfortably (but still has slight resistance), on the circles below. Find the circle that matches closest to the inside edge of your ring. If your size falls between two circles, choose the larger size. The measurement shown below each circle is the inside diameter of your ring.
